                                                                                                                                                                                                                                                                                                                                                                                                                                             FUNCTION: Cytokine that binds to LTBR/TNFRSF3. May play a specific role in immune response regulation. Provides the membrane anchor for the attachment of the heterotrimeric complex to the cell surface. Isoform 2 is probably non-functional.

SUBUNIT: Heterotrimer of either two LTB and one LTA subunits or (less prevalent) one LTB and two LTA subunits.

SUBCELLULAR LOCATION: Type II membrane protein (Potential).

ALTERNATIVE PRODUCTS: 2 isoforms; 1 (shown here) and 2; are produced by alternative splicing.

TISSUE SPECIFICITY: SPLEEN AND THYMUS.

SIMILARITY: BELLONGS TO THE TUMOR NECROSIS FACTOR FAMILY.
                                                                                                                                                                                                                                                                                                                                                                             SWISS-PROT entry is copyright. Involved in immunogle class switching (By similarity).
SUBUNIT: HOMOTRIMER (By similarity).
SUBCELLULAR LOCATION: Type II membrane protein. Also existancellular soluble form (By similarity).
PTM: The soluble form derives from the membrane form by proteolytic processing (By similarity).
SIMILARITY: BELONGS TO THE TUMOR NECROSIS FACTOR FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           proliferation in the absence of co-stimulus as well as IgE production in the presence of IL-4. TISSUE SPECIFICITY: Isoform a 1s widely expressed at similar levels in all tissues examined. Isoforms b1 and b2 are predominantly expressed in stomach although they are also detected at lower levels in other tissues. Isoform c1 is stomach-specific. Isoform c2 is expressed at slightly higher levels in lung and stomach than in other tissues.

SIMILARITY: BELONGS TO THE ANION EXCHANGER FAMILY.

                                                                                                                                                                                                                                                                                                                                                                                                 The sequence is that encoding mouse tumour necrosis factor related ligand (TRELL). TRELL or active fragments can be included with a carrier in pharmaceutical compositions to treat cancer, autoimmune diseases or immune responses to tissue grafts, or to stimulate or suppress the immune system. It is useful to screen for TRELL receptors, by labelling with a detectable label and screening compositions for binding. Agents interfering with TRELL-receptor binding can also be screened for, can then be administered, optionally with interferon- gamma, to induce cell death or treat, suppress or alter immune responses (especially involving human adenocarcinoma cells) involving a signal pathway between TRELL and its receptor. The DNA sequence can be used in gene therapy for TRELL-related disorders in mammals (especially humans), e.g. tumours, autoimmune and inflammatory diseases or inherited genetic disorders, by introducing into cells, and expressing, therapeutically effective amounts of a vector, e.g. a virus comprising a gene encoding TRELL. It may also be of use in the preparation of prepare probes for screening natural/synthetic DNAs for TRELL-encoding sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                18-MAR-1997;

APO4 is useful for diagnosing prostate cancer by determining levels of APO4 is useful for diagnosing prostate cancer completely. APO4 polypeptides are also useful for identifying selective binding agents linked to a therapeutic completely. APO4 polypeptides are also useful for identifying selective binding of contety. APO4 polypeptide/active fragment which is extracellular, or completely agents to the polypeptide/active fragment which is extracellular, or completely active fragment which is extracellular, or completely active fragments are also useful for screening completely active fragments are also useful for screening composites by binding and observing the changer in APO4 activity. Effective pharmacological agents useful in diagnosis or completely active fragments are also identified using APO4 polypeptides/active fragments and APO4 signal transducer molecules that specifically interact continue and APO4 signal transducer molecules that specifically interact continue and APO4 signal transducer molecules that specifically interact continue and APO4 signal transducer molecules that specifically interact continue and APO4 signal transducer molecules that specifically interact continue and APO4 signal transducer molecules that specifically interact continue and APO4 signal transducer molecules that specifically interact continue and APO4 signal transducer molecules that specifically interact continue and APO4 signal transducer molecules that specifically interact continue and APO4 and detecting a change in level of APO4 and detecting a change in level of APO4 and detecting a change in level of APO4 and apost transferted to human heaset carcinum call line about the about the apost attended to human heaset carcinum call line and apost attended to human heaset carcinue.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               δã
                                                                                                                                                                                                                The TNF-related endothelium proliferative agent (TREPA), or its activators or agonists, are used to treat a deficit of TREPA, e.g. to promote wound healing or tissue grafting, by promoting vascularisation, also to induce apoptosis for treating cancer and eliminating autoreactive T cells, as an adjunct to cancer chemotherapy or antiviral treatment. TREPA peptides can also be used to target cytotoxic agents or for affinity isolation of the corresponding receptor, the nucleic acid for which can be used to transform tumour cells to render them more responsive to TREPA and to screen for TREPA mimics.
                                                    conditions involving abnormal stimulation of epithelial cells atherosclerosis), for birth control (inhibiting ovulation and formation) or other angiogenic conditions (e.g. ulcers).
                                                                                                                                   Ribozymes, antisense RNA, antibodies or peptides, are used to treat TREPA-associated diseases, e.g. tumours and metastases (by inhibiting vascularisation), inflammation or a wide range of autoimmune conditions,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AAV47613;

                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to extracellular signal molecules, particularly members of tumour necrosis factor (TNF) family molecules designated as TREPA (TNF related endothelium proliferative agent). Soluble biologically active TREPA are used to treat TREPA-associated diseases, tumours or metastases. TREPA is used for inducing angiogenesis in human for promoting wound healing and for vascularising grafted tissue for successful grafting and to promote tissue grafts. The present sequence is a cDNA clone ID #690050 encoding human TREPA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Inducing angiogenesis in mammal at desired sites for promoting wound healing, by administering soluble fragment of extracellular domain of tumor necrosis factor related endothelium proliferative agent protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Wiley

                                                                                                                                                                                                                         The present sequence is that of cDNA clone DNA30879-1152

(ANTCC 209358) encoding human pRO207 (see ANY95338), which shows to monology to several members of the tumour necrosis factor family, especially human lymphotoxin (23.4%). The cDNA was identified in a foetal kidney cDNA library following identification of an expressed sequence tag with homology to human Apo-2 ligand. A claimed method for inhibiting the growth of a tumour cell comprises exposing the tumor cell to pRO179, pRO207, PRO320, PRO219, PRO221, PRO224, PRO3101, PRO526, PRO320, PRO3209 or PRO866 (see ANY95337-49), their agonists or chimeric polypeptides incorporating them. The tumour is especially a cancer selected from breast, contral nervous system cancer, melanoma and leukaemia. Nucleic acids encoding PRO179 etc. are used in the recombinant production
                                                                                                                                                                    Sequence 1353 BP;

polypeptides and the polynucleotide sequences encoding them. The PRO polypeptides, agonists, antagonists or anti-PRO antibodies are useful for treating benign or malignat tumours (e.g. renal, kidney, bladder, breast, etc), leukaemlas and lymphoid malignancies, other disorders such as neuronal, glial, astrocytal, hypothalamic, glandular, macrophagal, stromal and blastocoelic disorders, inflammatory, immune and angiogenic disorders. The polynucleotide sequences are also useful in gene therapy. ABK40254-ABK40288 encode for the human PRO polypeptides of the invention.
                                                                                                                                      Thirty five nucleic acids encoding PRO polypeptides, useful for treating benign or malignant tumours, leukaemias and lymphoid malignancies, inflammatory, angiogenic and immunologic disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               leukaemia; neuronal disorder; stromal disorder; blastocoelic
inflammatory disorder; immune disorder; angiogenic disorder;
gene therapy; cytostatic; neuroprotective; gene; ss.
